WATER *for Africa*

WATERSCENE'S THIRD ANNUAL UGANDA TRIP A HUGE SUCCESS!

Miracle Bulldozer

The miraculous discovery of an underground river happened when a bulldozer got stuck in mud and began sinking into the soft ground. As Gulu locals feverishly worked to dig out the bulldozer, water rose to the surface. They found that an underground stream ran through the orphanage property. A source of fresh water was now available for the children of this Uganda orphanage which had been threatened with closure!

Refreshing a parched land

Waterscene completed its third annual project to help provide fresh water for orphanages in Uganda. This time we helped develop sustainable food sources as well.

Waterscene's Steve and Linda Kovacs joined a team from H2O4All and others from South Delta Baptist Church to take part in a third trip to Uganda, to help provide sustainable food and water to this thirsty region.

Orphanages in the area are being shut down because of a lack of safe water. Existing reservoirs are becoming contaminated.

The only hope for these communities, made up largely

of orphans from ongoing civil wars and AIDS, is to provide new access to water supplies.

The trip was a huge success. The team traveled to different

orphans, including Gulu, the northern Uganda village that's home to the Watoto choir which travels the world bringing attention to this region.

The team of

10 Canadians worked with locals in each community, setting up rainwater collection

Watoto Choir in South Delta January 17!

Come and experience this incredible demonstration of a vision for African leadership. Jan 17, 2010 at 10:30am

The famous Watoto Children's Choir will be performing at South Delta Baptist Church on Sunday, January 17. All of them are orphans from Uganda, their lives transformed by the helping hands of others, their faith in God, and their dedicated

commitment to becoming leaders for their communities and nation. Their performance is a unique blend of native African rhythms, contemporary gospel music and ethnic dance. They've released 4 CDs and toured 4 continents.

Bringing hope, water and food to Uganda

and filtration systems for orphanages. In addition, H2O4All completed construction of a fish farm in partnership with Surrey's Pacific Academy at an orphanage ten hours drive south of Gulu, so that the local community could feed themselves on an ongoing basis rather than relying on the ever-diminishing supply of donated food from western nations.

Another five hour drive south of Gulu took the team to Subi, where they began construction of another fish farm. Water pumping stations were installed, filtering rainwater to provide clean water. Existing wells have become contaminated, and are expensive to construct. Rainwater collection systems are effective and much less costly to install than building new wells.

Team members also assisted by teaching in the local schools, helping the local people in various ways, and providing valuable consulting services.
